1. Introduction

- The Living Standards Measurement Study (LSMS) is a research project that was initiated in 1980. It is a response to a perceived need for policy relevant data that would allow policy makers to move beyond simply measuring rates of unemployment, poverty and health care use, for example, to understanding the determinants of these observed social sector outcomes.
- The program is designed to assist policy makers in their efforts to identify how policies could be designed and improved to positively affect outcomes in health, education, economic activities, housing and utilities.

2. Study year

Show studies conducted between 1890-2022

year_start	year_end
2005	2005
2004	2004
2003	2003
2002	2002
1995	1995
2018	2019
2004	2005
2003	2003
2002	2003
2001	2004
2001	2001
1996	1997
2007	2007
2003	2003
2001	2001
1997	1997
1995	1995
2020	2021

3. Dataset

- Data available from external repository
- Dataset has 9 attributes
 - id
 - idno (survey id number)
 - title
 - nation
 - authoring_entity
 - year_start
 - year_end
 - created
 - changed

4. Countries and Economies
